Problem Statement -

Enterprise customers often experience a fragmented and time-consuming onboarding journey for B2B SaaS applications.

Customers must navigate multiple documents, webinars, demos, and technical discussions to understand product prerequisites. This becomes more difficult when network, security, compliance, or infrastructure approvals require involvement from multiple internal teams.

At the same time, customers interact with several teams from the SaaS provider, which can lead to repeated conversations, unclear ownership, inconsistent guidance, and delays.

As a result, onboarding depends heavily on manual coordination and meetings, increasing time-to-value and creating a frustrating customer experience.

The key problem is the lack of a single, guided onboarding experience that provides clear requirements, ownership, progress, and next steps for both the customer and the SaaS provider.

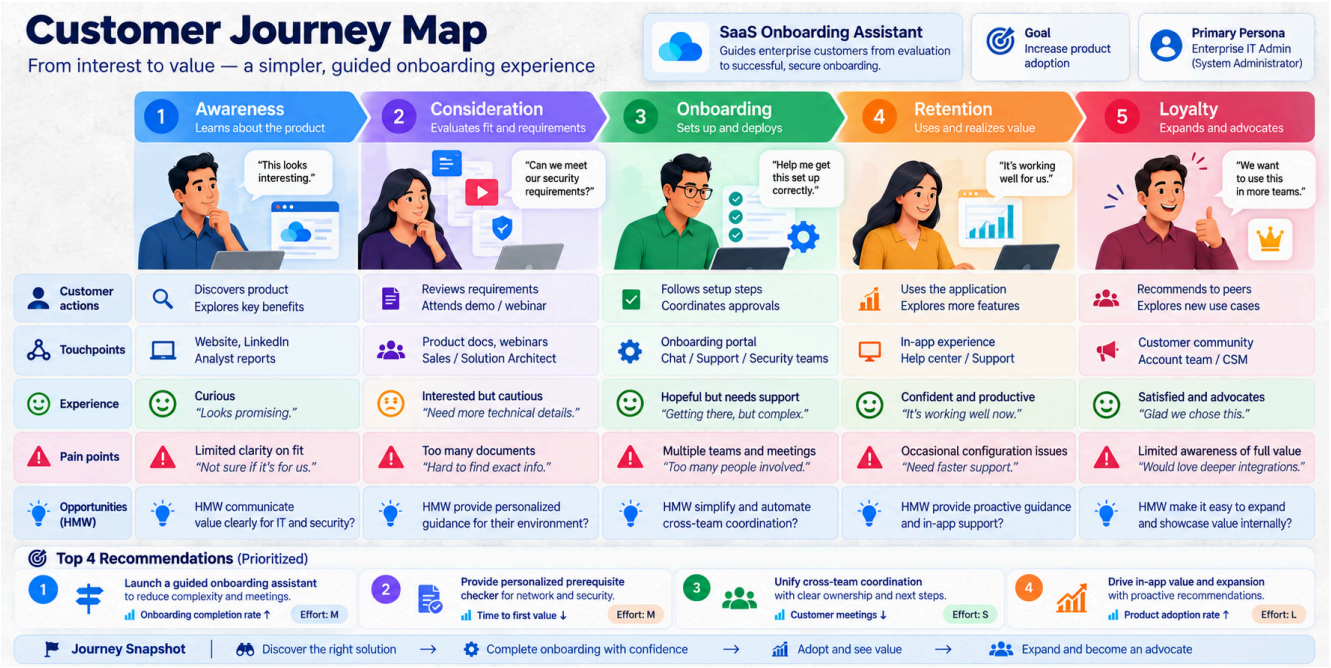

Goals and what are my non-goals -

- **Goals**
  - **Reduce the number of customer meetings and manual touchpoints required during onboarding**
  - **Provide customers with clear visibility into onboarding stages, prerequisites, ownership, progress, blockers, and next steps**
  - ***Improve successful onboarding completion and accelerate time-to-product adoption***
- **Non-Goals**
  - **Not focusing on video creation at this point**
  - **Not replacing existing Sales/CSM/Security teams**
  - **Not automating customer security or network approval decisions**

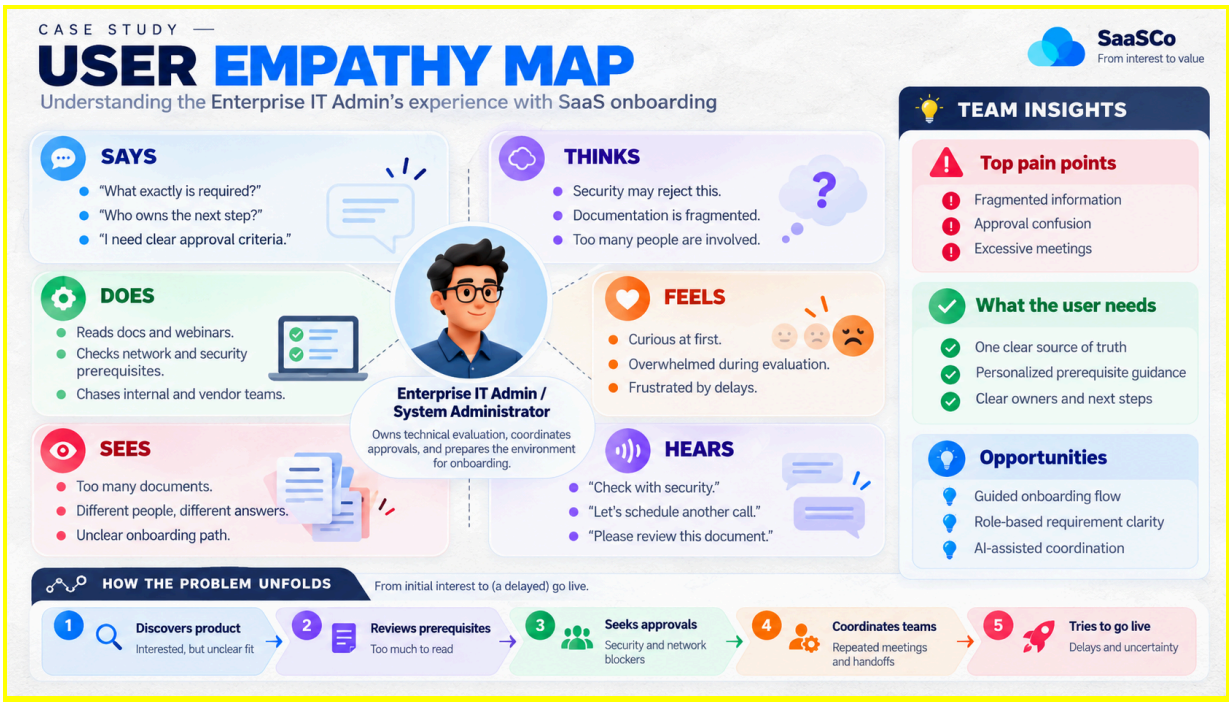

Success Matric

- **North Star** → Successful onboarding completion rate
- **L1**
  - onboarding completion rate ↑
  - median onboarding time ↓
  - number of customer meetings/touchpoints ↓
  - prerequisite-related follow-ups/escalations ↓
- **Counter** → Customer Onboarding CSAT should not decrease

FUNCTIONAL AND ACCEPTANCE CRITERIA / NON-FUCTIONAL REQUIREMENTS

- **Functional**
  - Enable customers to complete onboarding through a clear, guided, and trackable process.
- **Non-functional**
  - **P - performance -** Fast response and page load times
  - **Q - quality -** Accurate, clear, consistent guidance
  - **R - reliability -** Stable onboarding with minimal failures
  - **S - secure -** Customer data handled securely
  - **T - transparency -** Clearly show onboarding status, dependencies, owners, blockers, and next steps
  - **U - Usability -** Simple, intuitive, low-effort experience
